YOUR PARTNER FOR

SECURE WORKING FROM HOME

REMOTE WORK

has been growing for some time, but the COVID-19 pandemic has significantly accelerated its adoption. Although working from home is convenient, it's not secure - increasing the risk of data leakage and hacking. In fact, your employees are the most vulnerable link in your security chain.

EMPLOYEES OFTEN DON'T STRICTLY FOLLOW SECURITY PROTOCOLS WHEN WORKING REMOTELY.

This increases the risk of:

- **DATA BREACHES**
- **LOSS OF INTELLECTUAL PROPERTY**
- **REPUTATIONAL DAMAGE**

Even seemingly minor incidents, such as when an unauthorised household member gains access to sensitive data, can have serious consequences for an organisation.

AT INVISID, WE HELP YOU PROTECT YOUR EMPLOYEES IN THEIR OWN HOME.

PROTECT

01 your employees' access using our innovative **Behavioural Verification** technology. It analyses mouse and keyboard patterns to create a unique user fingerprint. If suspicious activity is detected, the session is automatically blocked, preventing hackers from doing further damage.

02 your sensitive data from prying eyes, even in the home office. Our **Gaze Protection** feature detects how many people are in the room, and blacks out the screen when your employee is no longer alone. As soon as the intrusion is over, the screen returns to its normal state automatically.

ABOUT US
WE ARE INVISID

InvisID is an up-and-coming cyber-security company based in Germany. Our goal is to protect sensitive employee and customer data and to simplify user authentication. With many years of experience, we have helped numerous companies mini-mise their security risks without inter-fering with existing business proto-cols. Contact us today to learn more about how we can help you protect your business and your remote work-force from cyber threats.
